

## Nordic Service Center

Service of rotating mechanical equipment

24  
HOUR  
SERVICE

### Why replace used equipment when it can be renovated and reused?

- Be financially conscious and save time and money
- Be climate conscious by recycling

## Service

We carry out preventive maintenance, repair and inspection of, among others, the following equipment:

- Agitators
- Centrifuges
- Gear motors
- Electric motors
- Pumps
- Vacuum pumps
- Fans and blowers
- Mechanical seals

Our services includes the following:

- Oil change
- Noise inspection
- Vibration measurements and analysis
- Inspection & repair of mechanical seals & other rotating mechanical equipment
- Replacement of wear parts
- Temperature control
- Status reports

We are happy to enter into service agreements with customers for preventive maintenance, so that expensive downtime is avoided.

## Service Center

Our Service Center has great competence and many years of experience in servicing rotating equipment.

We provide qualified service, maintenance and inspection of rotating mechanical and electromechanical equipment.

We perform service at the customers site or at our own mechanical workshop.

With the acquisition of the machine workshop P.J. Smede- & Maskinværksted (Lappecenter.dk), Nordic Engineering has added extra expertise to our Service Center. We can now also call ourselves specialists in repair and service of mechanical seals. Mechanical seals can, in the vast majority of cases, be renovated and become like new. By recycling and renovating the old seals multiple times, you save the environment for unnecessary pollution.

## Mechanical seals

In our Service Center we renovate all brands of mechanical seals. We have more than 20 years of experience in renovating seals and lapping of sliding surfaces. This gives our customers assurance of the quality of the renovation. We offer day to day grinding and lapping of sealing surfaces as well as complete renovation of seals, if we have the parts in stock. We are happy to stock new and refurbished mechanical seals in agreement with our customers. This ensures rapid emergency response in the event of a breakdown. We would like to enter into service agreements, to avoid expensive, unscheduled downtime.

**No Cure, No Pay!**

Send your seals to us and get a quote on the renovation. If we can't renovate the seals, it won't cost you anything.

## Service

We perform service on mechanical seals of all brands:

- Inspection of sealing systems at customer
- Advice on sealing systems
- Disassembly & assembly of seals at customer
- Renovation of seals in the workshop, including:
  - Dismantling & cleaning
  - Glass blowing & polishing
  - Inspection & control of all parts
  - Grinding & lapping, if necessary, also other machining
  - Flatness control of sliding surfaces
  - Installation & possible replacement with new parts
  - Final check with test run & pressure test of mechanical seals
  - Documentation e.g. test report, material certificates, EN1935, FDA, etc.
